Professional Summary

Performance-driven Computer Science Engineering student with a strong foundation in System Design, AI/ML Engineering, and Algorithm Optimization. Passionate about developing scalable software solutions and prototyping AI models using open-source libraries. Proficient in C++ and Python, with hands-on experience in Computer Vision, Generative AI, and Embedded Systems integration. Eager to join Intel as a Software Intern to contribute to high-performance computing, AI software development, and productivity enhancement tools.

Education

Lendi Institute of Engineering and Technology – Vizianagaram, India

(Expected 2027)

Bachelor of Technology, Computer Science and Engineering

GPA: 8.86/10.0

Relevant Coursework: Operating Systems, Computer Architecture, Data Structures & Algorithms, Computer Networks, Database Management Systems, Machine Learning, Deep Learning.

Core Competencies & Technical Skills

- Languages:** C++, Python, SQL, JavaScript, C.
- AI & Machine Learning:** Generative AI (LLMs, RAG), TensorFlow, PyTorch, Computer Vision (OpenCV, YOLOv8), Pandas, Scikit-learn.
- Systems & Cloud:** AWS (Certified Cloud Practitioner), Docker, CI/CD Pipelines, Microservices Architecture, Linux Environments, Git.
- Development Tools:** VS Code, Postman, n8n (Automation), Jupyter Notebooks.

SOFTWARE ENGINEERING PROJECTS

Real-Time Face Recognition & Attendance System | *Python, OpenCV, YOLOv8*

- Engineered a high-performance computer vision system using YOLOv8 and InsightFace for real-time detection, aligning with Intel's work in AI/ML and Graphics.
- Optimized inference speed for video processing, ensuring low-latency performance suitable for edge deployment.
- Automated data logging into structured formats (Excel/Database) using Pandas, eliminating manual entry and streamlining data processing workflows.

Real-Time Bus Tracking & Distributed System | *IoT Integration, Node.js, Firebase*

- Architected a distributed system to process live GPS data streams, integrating hardware data feeds with software visualization.
- Built a fault-tolerant backend capable of handling concurrent data packets from multiple sources, showcasing skills relevant to embedded systems and firmware-software interaction.
- Optimized data transmission protocols to reduce latency in real-time arrival predictions.

Cryptocurrency Market Prediction Engine | *Python, TensorFlow, LSTM*

- Designed a Deep Learning model using Long Short-Term Memory (LSTM) networks to analyze time-series data, achieving 80% prediction accuracy.
- Built a robust data pipeline to ingest, clean, and preprocess large volumes of market data, demonstrating proficiency in handling data-intensive applications.

LEADERSHIP & ACHIEVEMENTS

- GeeksForGeeks Campus Mantri (Ambassador):** Led 10+ technical workshops on Advanced Algorithms and system design, growing the community by 300+ members.
- Algorithmic Excellence:** Solved 500+ problems on LeetCode and GeeksForGeeks; attained a Max Rating of 1800 (LeetCode) and Specialist rank ([Codeforces](#)).
- Certifications:**
 - Google Certified:** Introduction to Generative AI
 - AWS Certified:** Cloud Practitioner
 - Cisco Certified:** CCNA (Networking Fundamentals)
